

SUMMARY

Experienced IT Operations engineer with a passion for automation and analysis. Driven critical thinker experienced in designing and administering highly available virtual IT infrastructure and streamlining operations using scripting and APIs. Security-minded and cloud-focused systems architect and engineer looking to leverage my diverse background in unique, challenging, and collaborative ways.

PROFESSIONAL EXPERIENCE

Ares Management, LP, Bethesda, MD

1/2017-9/2017

Senior Engineer

Member of the IT transition team at Ares after they acquired my previous company. Key resource in planning the administration, migration, and sunsetting of systems and data.

- Administered a 200 server VMWare environment from the underlying physical infrastructure up the entire VMWare stack. Executed all server and resource provisioning tasks for new builds. Partnered with the Network and Security teams to ensure endpoint security.
- Utilized RESTful APIs, Symantec Workflow Solution, PowerShell, and Python to automate technical offboarding tasks and to automatically update ticket statuses.
- Migrated server and account assets to AWS and IAM for third party management.

American Capital, LTD, Bethesda, MD

11/2011-12/2016, 4/2007-1/2009

Senior Engineer

Designed, implemented, and maintained a secure and highly available IT infrastructure as part of collaborative team of engineers spread across the United States and Europe.

- Responded to environmental alerts and mitigated OS, network, and software issues.
- Executed disaster recovery programming and testing. Contributed to disaster recovery planning and documentation.
- Partnered with the Director of Security to oversee third party penetration testing efforts and to prioritize, delegate, and remediate action items. Maintained firm-wide patch compliance above 90%.
- Authored Powershell, Python, and JavaScript code to provide automated solutions and reporting for patching, Microsoft administration, disaster recovery, high availability, hardware inventory, imaging, etc.. Authored scripts and workflows that leveraged RESTful APIs to manage SaaS solutions and to generate weekly/monthly reporting.
- Participated in the testing, selection, and administration of log aggregation tools. Integrated logging tools with our CMDB to automate ticketing and to streamline alerting.
- Served as a member of the Architecture Review Board. Collaboratively and individually designed and approved the implementation of new software and infrastructure with availability, security, and resource-minded focus.
- Redesigned and modernized ETL infrastructure. Partnered with third party vendors, DBAs, the security team, and application owners to implement SHA-256 encryption on all transfers without disrupting business services.
- Worked on cloud strategy and planning team. Implemented AWS test environment.

Systems Engineer

Primary stakeholder in the maintenance of the desktop environment. Designed, coded, and managed a quarterly software update system for over 3,500 global endpoints.

- Authored data collection scripts and provided reporting on OS migration, software deployment, and patch deployment status to the office of the CIO.
- Provided weekly SQL query training to the desktop team to assist in our reporting efforts.
- Established and implemented patch management policies for server and workstation environments.
- Chaired monthly global support staff communications meetings and solicited feedback from service desk technicians to assist in identifying and addressing pain points.

PERSONAL PROJECTS

Over the course of the last year, I have dedicated my after work free time to cloud-focused personal projects to enhance my skills as an engineer.

- Wrote Python code to scrape and compile data from disparate sources totaling over 3,000,000 raw records.
- Migrated the data to an AWS SQL database and authored SQL queries to create views to parse the data for analysis.
- Updated Python scraping scripts to run weekly and push new data directly to the SQL database. Authored SQL stored procedures to process and append new weekly data to existing tables.
- Currently working to migrate code to AWS Python Serverless Microframework

EDUCATION / TRAINING

Master of Science, Information Technology

Northwestern University, Evanston, IL

Bachelor of Science, Computer Science

Illinois Wesleyan University, Bloomington, IL

CERTIFICATIONS

AWS Certified Solutions Architect, June 2017

Certified Information System Security Professional (CISSP), May 2016

Certified Ethical Hacker (CEH), July 2016

VMWare VCA6-DCV Certified Associate

ServiceNow Certified System Administrator

Airwatch Enterprise Mobility Professional

Symantec Certified Specialist – Management Platform 7.5

MEMBERSHIPS

Northwestern University MSIT Alumni Advisory Board Member

Director of Symantec Chicago Altiris User Group, 11/10 - 7/12
