- Certified Scrum Master

EXPERIENCE:

FIDELITY INVESTMENTS, Merrimack, NH

1999 – 2018

Senior Planning Consultant / Project Manager (2011 – 2018)

- Supported Program Management Office by enabling all operations aspects of project execution including securing funding and resources, setting up projects, creating projects plans and road maps as well as generating and reporting status to various levels of the organization.
- Delivered investment oversight through discretionary investment review. Facilitated monthly senior management program review meetings to assess general health of programs/projects and facilitate resolution of issues, risks and roadblocks.
- Enabled development of business unit's 18-month product roadmaps aligned to organizational strategy. Created long term resource forecast and provided assistance in allocation and deployment of resources to help achieve program goals.
- Served as liaison between the senior management and software development teams to enable tracking of work for the entire portfolio using Jira and AgileCraft (Scaled Agile Management tool). This provided senior management visibility into the portfolio execution so that they could make decisions regarding funding and prioritization of work for the overall portfolio.
- Developed and rolled out business unit Tableau reports to measure and report on program and project health indicators. Partnered with business and technology stakeholders to define, measure and report on program KPIs and other project metrics.
- Provided organizational coaching and support for globally dispersed business / technology leaders and project managers in maintaining PMO standards, best practices and project performance evaluations. Coached and mentored new project managers throughout project lifecycles.
- Managed annual Core and Maintenance budget process for Retail Systems and QA / Test functional teams.
- Partnered with teams within and outside the business unit to establish Agile best practices. Supported continual improvement of project management processes.

Senior Manager Quality Management, Black Belt (2005 – 2011)

- As a process coach, trained and validated proper utilization of tools, techniques and templates in the requirements gathering process. Facilitated Joint Application Requirements sessions and led several teams to develop their requirements based on customer needs.
- Managed continuous improvement of the development processes by conducting feedback sessions and implementing improvement initiatives.
- As an internal consultant, provided thought leadership in formulating Agile deployment for a major business unit. Created criteria list for project selection, identified activities for the pilot project's deployment including training, infrastructure and process setups. Identified stories / tasks and organized planning exercises.
- Provided input to the evaluation of vendors offering Agile coaching and developed a short list of potential vendors for the business unit.
- Participated in the enterprise-wide Agile Coaching forum and led discussions on topics related to project reporting.

Black Belt projects for Six Sigma Certification (year certified 2005)

- Responsible for managing and delivering strategic process improvement initiatives for the HR/Payroll (HRP) information technology group.
- Successfully achieved a 50% reduction in SDLC defects by executing a series of Black Belt projects. These project initiatives focused on standardizing and streamlining HRP's QA process; implementing a test case management tool for the HRP product offering and coaching Development and QA teams on the tool usage and QA processes.
- Established measurement criteria for QA processes which were rolled out as business unit wide software development KPIs.
- Identified replication / scaling opportunities for improving quality of the Systems Testing process in other business units including Health & Welfare and Defined Benefits.

Senior Software Engineer Developer (2000 – 2005)

- Contributed to the implementation and integration of Workbrain (Time and Attendance application) into HR/Payroll's offering. Project involved working with various business units to design and implement the Websphere XML configurations and other infrastructure needed to implement and support third party vendor-delivered application.
- Identified and eliminated non-value-added activities in the implementation process.

Software Engineer Developer (1999 – 2000)

- Designed and developed a Voice Response System (VRS) to allow callers to enter timesheet data for HR/Payroll.
- System was implemented primarily with C/C++ and was developed in a distributed environment on an IBM Voice Response Technology platform.
