Education

Masters in Computer Science | Syracuse University, New York, NY | GPA 3.5/4.0 **Aug' 2018 - Present**

Relevant Coursework: Object Oriented Programming | Design & Analysis: Algorithms | Structured Programming & Formal Methods | Operating Systems | Principles of Mathematics in Computing | Social Media and Data Mining | Computer Architecture

Bachelors in Computer Engineering | University of Mumbai, India | GPA 3.9/4.0 **Aug' 2014 - May 2018**

Relevant Coursework: Data Structures | Software Engineering | Structured Programming Approach | Database Management | OOP

- **Certifications:** **Algorithms - Design And Analysis Part 1 & 2 [Stanford University] | Compilers [Stanford University] | Modern Object-Oriented Programming for System and Application Development**

Skills

Cloud Technologies and OS:	AWS Amazon EC2 DialogFlow Amazon Redshift Azure Windows Linux Mac OSX
IDE and Software tools:	Visual Studio Pycharm Eclipse Netbeans SQL Studio SQL Server Anaconda Oracle 11g
Programming Languages:	Python C++ SQL Java C Json PHP Javascript React R Haskell Shell Scripts
Functional Skills:	SDLC Agile Method SCRUM Quality Management Statistical Analysis

Work Experience

Software Engineering Intern – Cecelia Health, New York, NY **Aug' 2018 – Present**

- Implemented a meticulous dynamic process in Python, in place of existing process that was not dynamic and having huge overhead
- Assisted in development of reconfigurable APIs, as requirements are varying from client to client, which made reporting dynamic
- Collaborated with designers to create clean interfaces, simple and intuitive interactions for having optimal experiences in ReactJS
- Contributed for delivering the software solutions with the product roadmap and sprint plans accordingly released plan milestones
- Scripted complex SQL queries for extracting meaningful information from disparate systems for data profiling in healthcare data

Software Engineering Intern – Gloworm Softwares, India

Jun' 2017 – Aug' 2017

- Assisted Gloworm Software's tech team with system design specifications and development for the Python based project
- Developed and maintained organizational level software and web applications for a range of divisions across the company
- Integrated and prepared client-side windows-based applications in Python and SQL Server with respect to required client functionalities
- Crafted dynamic and interactive dashboards in JavaScript thereby reducing weekly overhead of departments by 8 hours
- Improved SEO ranking by structuring the data in Oracle EDW to drive customers to the website (19% growth in website traffic)

Projects

Software Engineering | Automatic Data Loader **[Python | Json | Logging | SQL]** **Jun' 2019 – Aug' 2019**

- Developed a completely automatic and dynamic data loading process in Python, which is 100% configurable according to user
- Incorporated data handling & manipulation by enacting validation, logging mechanism & file-watcher with apt design pattern
- Implemented security constraints by adding own code for encryption & decryption for keys & passwords in PY-Fernet SHA-256
- Successfully accomplished all features of ETL [SSIS] mechanism to get target data in DB - SQL Server, in optimal time and space

Software Engineering | Instant Supply Manager Button **[IoT Product | Python | PHP | MySQL]**

Jul' 2017 – Aug' 2018

- Created an IoT button in ESP8266 module focusing on making user life at ease for ordering daily routine purchases from our site
- Integrated with the purchase recommendation and pattern prediction algorithms for product history in e-commerce website
- Framed dynamic invoice and report generation mechanism and the product prediction system is having accuracy up to 87.37%
- Designed test cases for device and web application as well as debugged and diagnosed the user issues encountered in system

Full Stack Development | E-commerce Website

[JavaScript | PHP | SQL | SDLC | SMTP]

Jan' 2018 – May 2018

- Implemented a sophisticated e-commerce website which satisfied all the required Software Project Management features
- Devised a user-friendly frontend using CSS, JavaScript and PHP, synced with Oracle 11g at backend serving for client and farmer
- Enhanced the security mechanism by integrating with plugins capable to detect fraud and any robotic movement on the website

Windows Application | College Finder

[Java | SQLite | Springs]

Jan' 2018 - May 2018

- Accomplished a windows-based application in Java Springs framework for having ease in school admission process for students
- Created an automated report generation that allows students to generate list of colleges according to customized filter in UX/UI
- Database consists of around 5,000 colleges data and was having almost 3 lakh students, now it's used by local organizations

Achievements

- Received **State Government INSPIRE Fellowship** for being among top 1 percentile in senior high school students.
- **Acquired 30% of graduate tuition fee as a scholarship grant from Syracuse University, for academic excellence.**

International Publications

- Authored a research paper "**Breast Cancer Detection by Kirsch Algorithm**" as the first author and published it in IJIRCCCE 2017.
- Published a paper on "**Blue Eyes Technology**" in International Journal of Innovative Research in Computer and Communication.
- "**ISMB - A Instant Supply Manager Button**" published in the International Journal - Advances in Science and Technology 2018.
