SOFTWARE DEVELOPER / ENGINEER

**Recent experience with Epic Systems as a Software Developer.
B.S. in Computer Science degree from Stony Brook University.
Consistent record of meeting and surpassing goals at the university and the workplace.**

- ☐ High level of adaptability, with experience and success in learning new and unfamiliar coding languages.
- ☐ Work effectively in both independent and team initiatives that range from small to large projects.
- ☐ Excellent eye for detail, including identifying and resolving issues affecting application performance.
- ☐ Deep interest in the field of software development, with continual involvement in ongoing learning.

Selected Knowledge & Skill Areas:

Software Development Lifecycle (SDLC); New Functionality and Enhancements to Existing Applications; Sprint Planning; Feature Development and Testing; Code Reviews; Project Collaborations; New & Emerging Technologies; Presentations; Bug Troubleshooting and Resolution; Application Security; Documentation

Technology Skills:

C#, JavaScript, Python, C++, Java SQL, Typescript, HTML/CSS, C

PROFESSIONAL EXPERIENCE

EPIC SYSTEMS – Madison, WI – 2020-2023

The largest company in the health tech industry, with 2K+ employees.

Software Developer

Assigned to repair a minimum of 2 QA notes per week (consisting of customer-reported or internally discovered issues, including software crashes, missing functionality, or other unintended changes). Played key role collaborating on development project with multiple developers.

Worked primarily with Typescript, C#, and Epic's internal server language, as well as older pieces of Epic's application written in Visual Basic. Recreated application using C# and Typescript. Worked solo, in small teams, and in larger teams on various projects/applications.

- **Led the contribution for the team to meet new government regulations** requiring a patient to have access to their entire Electronic Health Record (EHR) when requested. Parsed over all data and

determined requirement levels for each, creating availability to patient for required items via Epic's SQL system. Met all project deadlines.

- **Served as a liaison for the team with the SQL development team**, understanding requirements and relaying relevant information from the SQL group back to the team.
- **Built a customer-requested feature to divide security settings between Reviewers and Signers**. Managed both scoping of the project and development of the required changes; determined affected areas and changes that were needed, as well as communicating with relevant parties.

EDUCATION

Bachelor of Science in Computer Science

STONY BROOK UNIVERSITY – New York, NY

Key Courses:

Software Engineering, User Interface Development, Technical Communications, Legal Issues in Info Systems, Fundamentals of Computer Graphics, Principles of Database Systems, Analysis of Algorithms, Internet Programming, Systems Fundamentals, Computer Communications, Introduction to Computers, Topics in Computer Science, Theory of Computation: Honors, Survey of Probability and Statistics

PROJECTS

Discord Bot (Independent Project) - 2020

Used Discord's API to read user input and create 2 teams of 5 individuals from a shared pool of 10 names. Wrote JavaScript bot primarily using Node.js, with a Python and SQL-based database backend. Enabled game players to be able to select random game classes.

Falling Leaf Simulator (Stony Brook University) - 2019

Wrote animation in C# that created leaves out of triangles, circles, and squares appearing atop a tree and falling to the ground. Simulated trajectories and speed via algorithm to achieve realism.

Game Design (Stony Brook University) - 2018

Designed civilization-type 5X game in Java that enabled selection of city and the subsequent construction of buildings and units to populate the location.
