

NICHOLAS HEBBELN

C# / .NET Developer

Addison, TX 75001

314-941-9914

nicholashebbeln@gmail.com

ABOUT ME

I am a proven C# developer responsible for significant improvements across several products and workflows. I work with an eye toward streamlining, verbose and filterable logging, and rapid iteration.

SKILLS

C#	Azure Cloud Services	Entity Framework
.NET	REST APIs	Jira
SQL	Microservices	Confluence
git	Distributed Computing	SSMS
LINQ	Event-Driven Architecture	System Administration

ACHIEVEMENTS

Viotech Publishing Solutions

Error Reporting in Address Validation Software:

Designed and developed a process for creating error reports via the company's Address Validation solution where none existed. The reports would list only precise lines and the exact issues preventing proper ingestion, which could then immediately be utilized to arrange kickbacks. This removed the need to hand review large input .csv documents for misplaced commas, missing fields, and so on. This saved two to three hours, per day, for four employees.

Natoli Engineering

LVS End-User Application Replacement

The original LVS application was developed by a third party manufacturer. Documentation on its functions and source code were unavailable, and diagrams of the device itself were missing. It was not possible to open the hardware to verify parts and their connections for months. Despite this, developed entirely new software from scratch by studying and reverse engineering the original app and old emails. The new app improved read speed from four updates per second to constant and instantaneous, lessened memory requirements by roughly half, and accompanied the release with comprehensive documentation. This also allowed the company to move forward with securing an alternative manufacturer.

HOBBIES

- Hobby Game Programming
 - Tabletop Game System Design
 - Musical Composition
 - Digital Illustration
 - Coding Mentor

WORK EXPERIENCE

Viotech Publishing Solutions

Dallas TX

C# Developer

July 2022 - October 2024

- Manage multiple relational SQL databases
- Develop APIs to facilitate controlled and consistent access to company data
- Maintain and update legacy code to utilize:
 - Azure cloud services (*Insights, Alerts, App Config*)
 - .NET 8
 - Event Driven Architecture
 - Microservices
 - CI/CD
- Document software and processes, both legacy and new, for developers and end users
- Handle troubleshooting and errors on an as needed basis per day to day operations across all workflows
- Research, plan, and design new workflows to meet the needs of internal and external users

Natoli Engineering

Saint Charles MO

Tech. Support and Development Rep.

July 2021 - June 2022

- Sole developer and training specialist for the (Laser Vision System) LVS-700 and other models
- Travel for on site analysis, troubleshooting, training of new customers
- Perform comprehensive validation to confirm customers remain in compliance with FDA regulations
- Develop replacement GUI application for interfacing with laser measurement hardware
- Collaborate with hardware manufacturer as sole company representative to test and prototype physical components of new model LVS

CarShield

O'Fallon MO

Phone System Administrator

July 2017 - June 2021

- Software installations, upgrades, interoperability
- Company scale hardware and software roll-outs
- Interface with Windstream, Cisco, Forte Data
- Adminstrate Zendesk, coordinate subordinates across multiple locations
- Generate tools to mass analyze and correct lead, promotional, and financial data for executive suite
- Adminstrate phone queues and agent priorities
- Create, update, terminate user accounts
- Manage group policies and printers
